Vidrios San Miguel Coop V

Climate change is a fact. Vidrios San Miguel decided many years ago that it cared about this, and as a result decided to produce only 100%-recycled glass with all the benefits involved. It is perfectly possible to produce a large range of shapes and colours, and the company today offers nearly 25,000 possibilities, with excellent service, quality and competitive prices. The advantages of recycling are enormous compared to other production processes. Global warming has reached a point where every individual action from any person around the world is more than welcomed as a contribution to reducing the consequences of this phenomenon.
